

## SCM

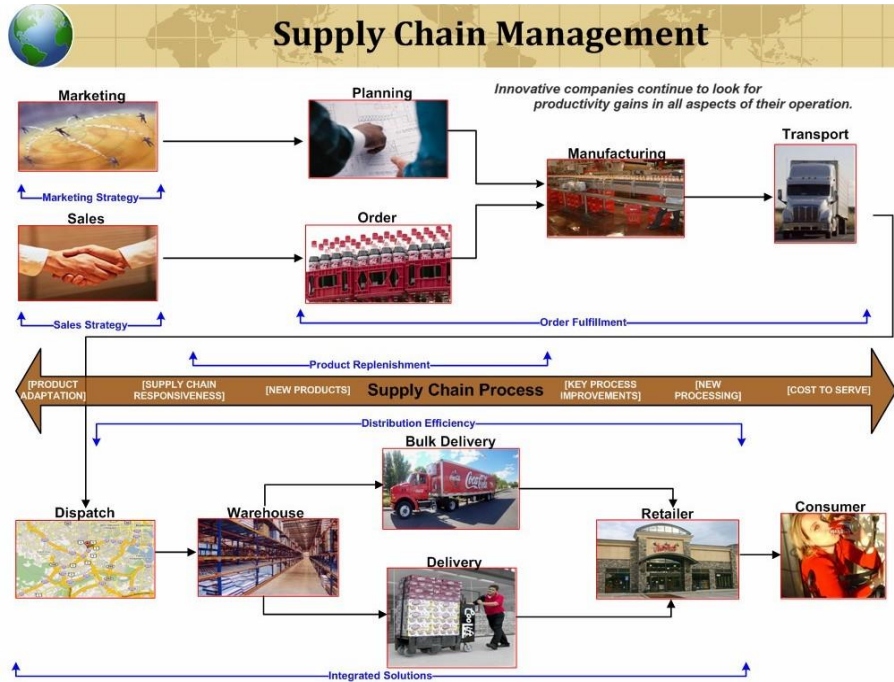

WHAT? Supply Chain Management

WHY? Providing optimal integration between a company and its partners, suppliers...

PURPOSE? Integration & keeping track of all products, materials...

Integrated with demand side (all info in 1 system)!

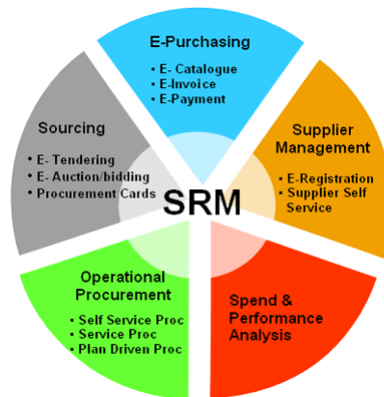

SRM

"Let's get a good deal"

## SRM

WHAT? Supplier Relationship Management

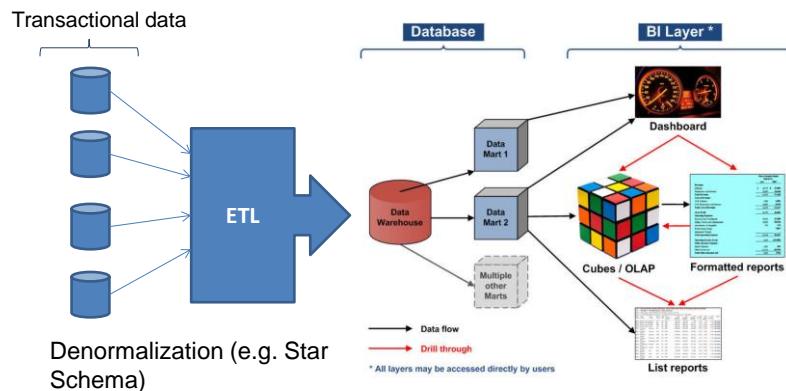

WHY? Offering optimal integration with suppliers

## BI

WHAT? Business Intelligence

WHY? Data is not information. Information is not knowledge.

## Business Intelligence

WHAT?

Gathering and formatting raw data into information (ETL).

- Extract (get data from different sources)
- Transform (Clean and transform/translate data)
- Load (Load data into the DWH, Denormalization)

Analyzing & processing information into knowledge.

## Business Intelligence

### 3 MAIN PARTS:

Data Warehouse (Gathering & formatting Data)

Analysis Software (**OLAP**) (Multi-dimensional, trends etc.)

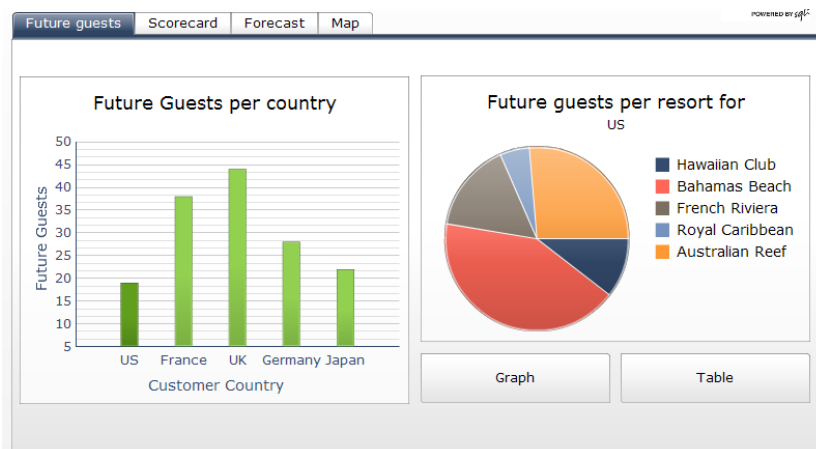

Reporting tools (Reports, Dashboards...)

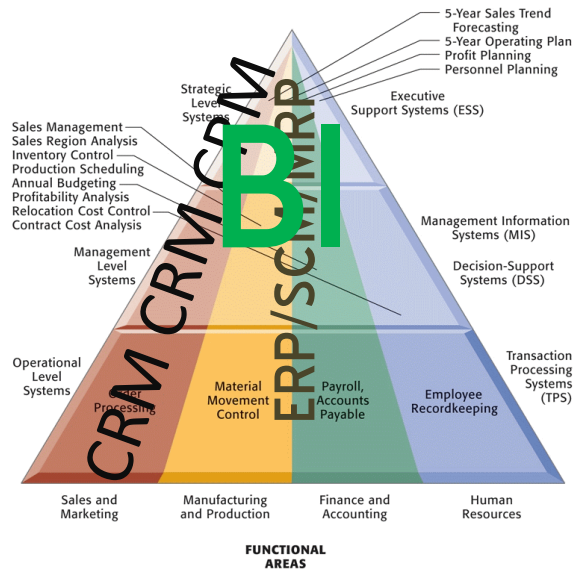

**OLTP** is not considered to be a part of BI.

OLTP is regular reporting, done on transactional data

## BI

### EXAMPLE - Dashboard

## ECM

ECM = Enterprise content management

WHAT? Managing content that is not organized as a structured DB.

WHY? To be able to organize, find and use this content.

## TERMINOLOGY?

\*Document & Web Content Management

\*Metadata

\*OCR

\*Workflow Management

## ECM – Web content management

## ECM – Document Management

## ECM – Document Management

What are advantages of a product like sharepoint?

Version Management of documents

Access Management of documents

Centralized repository

Shared Agenda's

Archive for future use

Integration point for Projects

Everything available from everywhere

## ECM – Document Management

### Free ECM? Google Drive

## ECM - OCR

Another 3 character Acronym... What is this?  
Optical Character Recognition.

What does it do?

Reading non-digital characters (typed or handwritten)

Analyzing these characters

Digitalizing the characters

Examples online

## ECM - OCR

What is it used for?

For example: automatic scanning of vendor invoices.

What are its advantages?

Store/archive texts efficiently

Possibility to edit scanned text

Search on scanned text

Automatic translation

Add Meta-data

## ECM - OCR

How does it work?

A.I. learns to analyze sequential  $\frac{1}{2} + \frac{1}{2} = 1$

Makes guesses at characters

Requires calibration

Can Improve by learning

New Technology?

- NO ☺, First developments already in 1929 (Gustav Tauschek)
- 1965: Reading labels on letters by US Postal Service (Mail Sorter)
- Last 10 years better use because of
  - Increase in processing power
  - Better scanners.

## ECM - OCR

How well does it work?

Commercial software 71 – 98% accuracy

Hand writing gives most issues

Free online services

<http://www.onlineocr.net/>

<http://www.newocr.com/>

<http://docs.google.com/>

Recognition of patterns besides text like images?

Google Goggles

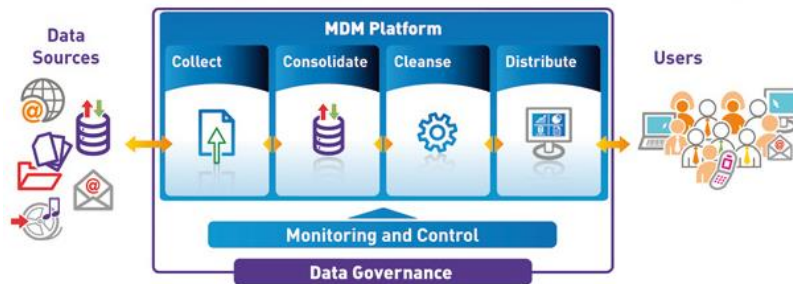

## MDM

WHAT? Master Data Management

WHY? Data is:

- \*Scattered
- \*Inconsistent
- \*Duplicated

PLM  
"Offer the best"

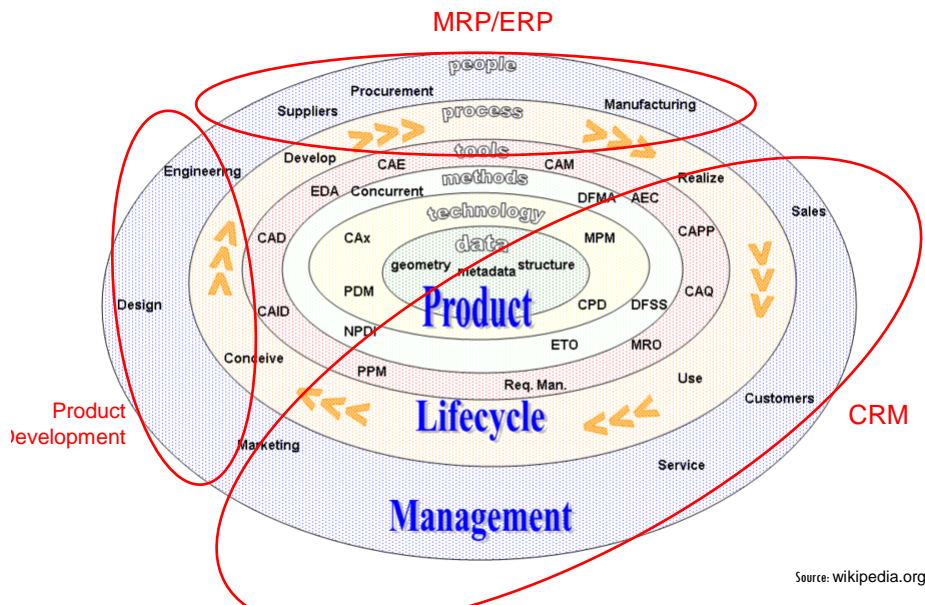

## PLM

WHAT? Product Lifecycle Management

WHY? Products have a very specific lifecycle

## PLM software: integrating all aspects

### An Integrated application asks for an integrated project approach

- Cross-functional teams → which (business) language do you speak?
- Role of the integration manager <> project manager
  - Importance of alignment and coordination
  - Communication
- Testing in its most extensive definition (unit; acceptance; integration; end-to-end; iterative testing; parallel run/performance)

### An Integrated application asks for an integrated project approach

- Understanding the principle “your deliverable is not the last step of the project” → look closely at interdependencies
- Planning is everything:
  - “If you fail to plan, you plan to fail”
  - Importance of an integrated and accepted planning
  - Respect milestones
- **Change Management!**
